Amsterdam, The Netherlands

SUMMARY

Senior Software Engineer with 13+ years in web development, including 6+ at Miro, specializing in content and user management. Worked on self-serve plans (organic growth) and large Enterprise customers (performance and security). Passionate about building holistic, accessible user interfaces, improving user experience, and contributing to the product through experimentation

EXPERIENCE

09/2023 - Present

Russia, Armenia, The Netherlands

Senior Software Engineer (Full-stack), User Management team

Miro

https://miro.com

- User Groups: As one of the main DRIs, delivered one of the most requested customer features: granting access to groups of users instead of individual manual assignments. It covered group management, automatic SCIM provisioning from identity providers, content access, and board collaboration. Released with no major incidents and ~20% adoption, which is very high for Enterprise customers
- User list migration: Migrated the large user list to OpenSearch, significantly reducing infrastructure costs and improving UX. Introduced TanStack Query for state management and optimistic updates. Moved data tables from React Window to TanStack Table, which simplified sorting, filtering, and pagination and enabled the user list redesign

06/2020 - 09/2023

Russia, Armenia, The Netherlands

Senior Software Engineer (Front-end), Content Access Management team

Miro

https://miro.com

- Board sharing: Redesigned the board-sharing feature, a critical component of the acquisition metric. Collaborated with product managers and designers in a design sprint, then experimented with and analyzed metrics across different versions
- User mentions: Ran A/B tests for user mentions on boards to increase user engagement
- Dashboard: Redesigned the Miro dashboard with board thumbnails, improving navigation and making relevant boards easier to find
- Co-owner role: Implemented the Co-owner board role end to end, including settings and user experience, solving access management for board owners

Miro

Across both teams

- Hiring & mentoring: Hired engineers at all levels through live coding, system design, and behavioral interviews. Helped set up a new team in Berlin, mentoring and onboarding three front-end engineers
- Experimentation: Ran A/B tests and gradual feature rollouts using Split.io and an in-house solution
- On-call: Handled monitoring and observability (Sentry, Grafana, Coralogix) and incident management (OpsGenie, Incident.io)
- Design System: Contributed to in-house Design System components based on Radix
- Accessibility & localization: Supported product accessibility (a11y) and localization

02/2018 - 05/2020

Russia, USA (remote)

Solution Architect and Founding Software Engineer

SmartData

https://smartdata.vc

SmartData is a platform for venture investments developed by the Smarthub Venture Fund (https://smarthub.vc/). SmartData provides investment portfolio management tools designed to deliver a data-driven service for venture investors

- Platform from scratch: Joined the project at its start and took part in the platform architecture and tech stack selection. Designed the database structure and APIs
- Portfolio management tool: Converted the fund's Excel-based investment processes into code, delivering a portfolio management tool as the first product
- Marketplace: Built the next product, a marketplace where venture funds could invest in projects collaboratively
- UI/UX: Collaborated with a product designer on UI/UX design and implemented the result

EXPERIENCE

08/2016 - 01/2018

Russia

Engineering Manager

Knoema

Knoema was a data intelligence platform that aggregated billions of time series from 1,500+ global sources into a single searchable, visual interface, effectively "the Google of data." It also built custom solutions for enterprise clients including the World Bank, African Development Bank, Syngenta, Caterpillar, McKinsey, and GIC (Singapore's sovereign wealth fund). Founded in 2011, the company grew from 500 datasets to 3.9 billion time series before being acquired by Eldridge Industries in 2020. It was rebranded as Seek (seekinsights.com) in 2025 and gradually wound down its public data mission

- Team leadership: Managed an international team of 12 developers and 4 QA engineers across Russia and India
- Releases: Oversaw release builds and production deployments
- Production stability: Monitored the production environment and owned the response to critical issues

04/2013 - 08/2016

Russia

Full-stack Software Engineer

Knoema

- Data upload & analysis: Implemented key features for dataset upload and analysis
- Data visualization: Built data visualization features based on the D3.js library
- Premium subscription: Introduced a Premium subscription, focusing on experiments, growth, and promotion
- Data assistant: Developed a data assistant bot powered by the Knoema search engine

EDUCATION

2005 - 2010

Master degree, Applied Maths and Computer Science

Perm National Research Polytechnic University

SKILLS

Front-end

HTML CSS (Vanilla CSS, CSS-in-JS, Tailwind) JavaScript (ES6+) TypeScript React

State management (Redux, TanStack Query, Atom) Design Systems (Radix-based)

Testing

Jest Testing Library Vitest Playwright (end-to-end)

Client-server

HTTP REST API WebSockets

Backend

Java (basic) Kotlin (basic) Node.js (Express, NestJS)

Databases

PostgreSQL OpenSearch

Build & CI/CD

npm Yarn Rspack webpack Git GitHub Docker

Observability & Incident Management

Sentry Grafana Coralogix OpsGenie Incident.io

SKILLS

Product

- Solution kick-off and review
- Solution design
- A/B testing
- Analytics (Snowflake)

Other

- React Native
- AWS (Amazon Web Services: EC2, RDS, S3, CloudFront)

TRAINING / COURSES

Interface Development School (SHRI)

Yandex Academy

Leadership program

FranklinCovey

LANGUAGES

- English
- Full professional
- Russian
- Native
